Summary

You clamp it to DIN37 and you have right angle DIN37 to fit your din stuff

[Hobby & Makers](#) > [Electronics](#)

Tags: [adapter](#) [rail](#) [din](#) [din37](#)

This is a printable DIN37 rail segment, that has printed in DIN-clips to be installed over another DIN37 rail and 90 degree angle.

Somewhat detailed dimensioned drawings attached.

4 sizes: 100, 120, 150mm are centered by carrying rail, while 73mm version is as short as possible, and truncated off-center.

You have to break carriages and springs off support walls underneath, I successfully used pliers to twist them off supports.

There are 0.6mm supports built in design to support springs and carriages. Supports are made as separate bodies. This is done so you can SPLIT TO PARTS in your slicer, and adjust print settings for them (i.e. set smaller extrusion rate and slower speeds, or use different material), so it will be easy to break carriages free.

Printed in ABS, 0.2 layer, 0.4 nozzle, 3 perimeters @ arachne mode
