This model has two variations: screw-through and keyhole. The keyhole variation allows you to add the mount to an existing extrusion bolt. The keyhole version comes with a left and right side, while the screw-through can be printed twice.

This model fits the aluminum DIN rails that have the extra support feet at the base. It should also work with standard steel rails.

The models come with supports built-in but they are easily removed with small pliers.

The rail will insert 5.5mm on each bracket be sure to measure twice before cutting.

The models' filename indicates the depth of the bolt retainer tab.
